Benefits of Advanced Statistical Process Control for Industrial Heating Applications

Oven with 36 temperature control zones

Electric Immersion Heaters

Nadcap compliant control system

Many modern day thermal processes require a high degree of temperature control and recording requirements produced by advanced process control systems. The investment has a quick ROI by reducing labor cost and increase process stability for predictable results.

Benefits achieved using our advanced statistical process control

- Management of multiple temperature zones and multiple processes
- Each control variable can be data logged on a network or remote PC through RS 485
- Accuracy within + / - 3°F
- Controls can read in 1/10 of a degree F.
- Facilitates preventive maintenance schedules
- NADCAP compliant systems available
- Factory direct and Service support
