

Horizontal Cross Flow Ovens

Horizontal Cross Flow Oven is one of three styles available for Oven airflow the other two are top to bottom type and both sides to top.

In a Horizontal Cross Flow Oven, you usually have an entire wall pushing the air with opposite wall pulling the air; typically this is left to right.

The Horizontal cross flow oven has a maximum rating of 500 degrees F.

One of the nice features of this oven is the changing of the open coil elements they have a removable drawer so you have less down time should this occur.
